Cami's competitors have critical gaps that we are actively solving

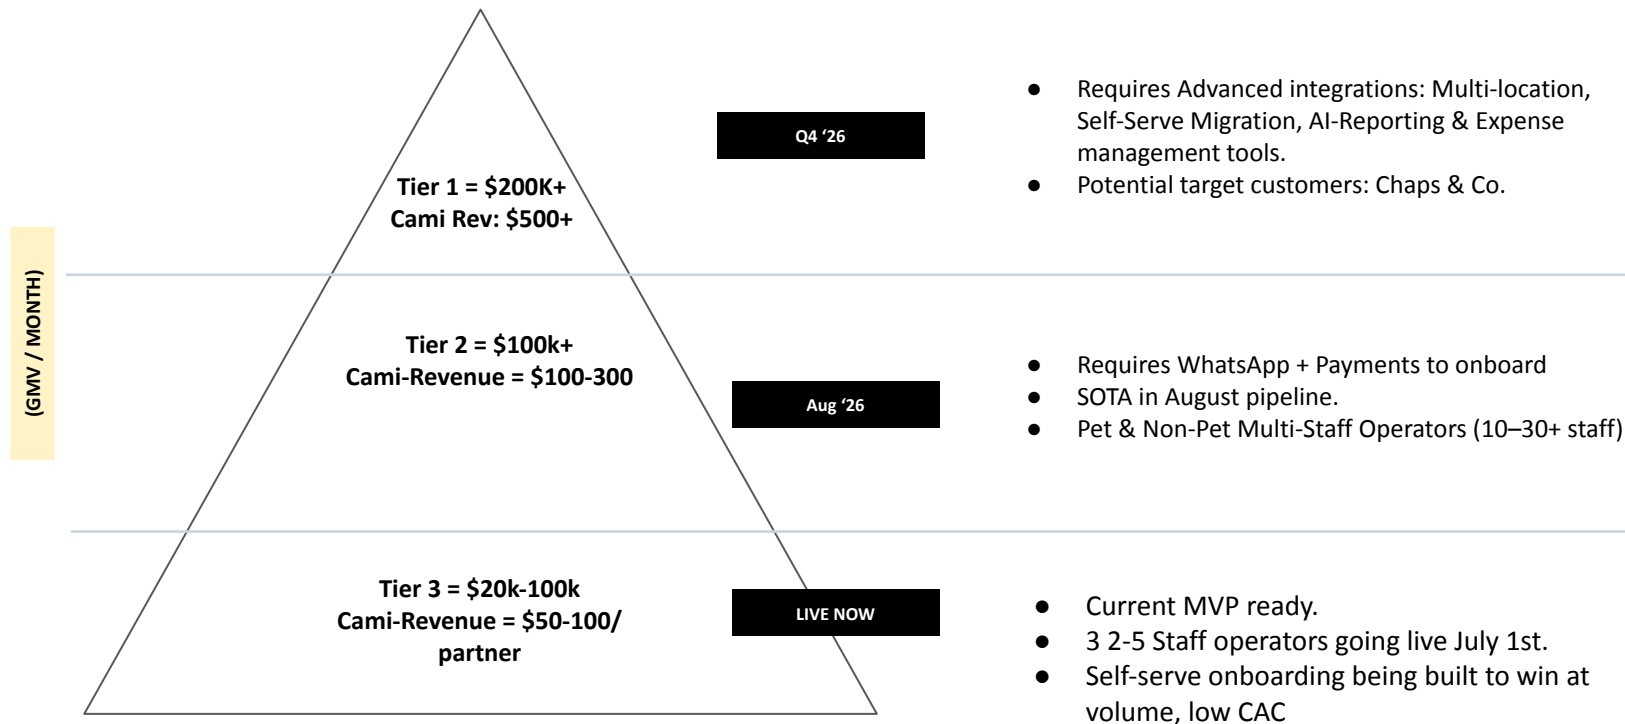

No WhatsApp CRM. No offline payments. We are building both. That's the fight.

What's changed

Onboarding scaled up: EOY active businesses revised from 12 to 36 (3x).

Monetisation reworked: Added WhatsApp and reminder monetization, with lower average transaction value (\$75 to \$50) and transactions per business (600 to 500).

Revenue up, burn held same: Cumulative revenue is 17% higher at 12 months, while 12 month burn improves from \$411K to \$389K.

Team asks

Add commercial capacity: Bring BD and account management headcount in earlier to deliver EoY target.

Internalise the tech team: Shift from the outsourced model to an in-house product and engineering function for faster iteration and more agile delivery.
